

IN THE CLAIMS

---

Please cancel claims 1-10

Please add the following new claims

11. (new) A tent with at least one extendable window designed to increase usable space in the tent comprising:

a main structure including a plurality of walls oriented at a first angle with respect to a vertical reference; and

at least one window including a frame and screen extendable to a second angle with respect to a vertical reference, where the second angle is less than the first angle and the extended window is substantially vertical;

whereby the tent has increased usable space when the window is extended.

12. (new) The tent of claim 11, wherein:

the window includes an awning coupled to the main structure and the frame, and configured to hold the window in an extended orientation.

13. (new) The tent of claim 11, wherein:

the frame includes a flexible pole; and

the frame includes a sleeve into which the pole is positioned.

14. (new) The tent of claim 12, wherein:

the frame includes a flexible pole; and

the frame includes a sleeve into which the pole is positioned.

15. (new) The tent of claim 12, wherein:

the awning is configured to hold the window frame in a substantially vertical orientation.

16. (new) The tent of claim 14, wherein:

the awning is configured to hold the window frame in a substantially vertical orientation.

17. (new) The tent of claim 11, further comprising:

a lower attachment seam at a location below the midline of the main structure where a lower edge of the window attaches to the wall of the tent, which acts as a hinge mechanism, allowing the window to extend or retract.

18. (new) The tent of claim 12, further comprising:

a lower attachment seam at a location below the midline of the main structure where a lower edge of the window attaches to the wall of the tent, which acts as a hinge mechanism, allowing the window to extend or retract.

19. (new) The tent of claim 13, wherein:

a lower attachment seam at a location below the midline of the main structure where a lower edge of the window attaches to the wall of the tent, which acts as a hinge mechanism, allowing the window to extend or retract.

20. (new) The tent of claim 14, wherein:

a lower attachment seam at a location below the midline of the main structure where a lower edge of the window attaches to the wall of the tent, which acts as a hinge mechanism, allowing the window to extend or retract.

21. (new) A tent of claim 15, wherein:

a lower attachment seam at a location below the midline of the main structure where a lower edge of the window attaches to the wall of the tent, which acts as a hinge mechanism, allowing the window to extend or retract.

22. (new) The tent of claim 16, wherein:

a lower attachment seam at a location below the midline of the main structure where a lower edge of the window attaches to the wall of the tent, which acts as a hinge mechanism, allowing the window to extend or retract.

23. (new) The tent of claim 11, wherein:

the window includes a flap configured to selectively cover the window.

24. (new) The tent of claim 12, wherein:

the window includes a flap configured to selectively cover the window.

25. (new) The tent of claim 13, wherein:

the window includes a flap configured to selectively cover the window.

26. (new) The tent of claim 14, wherein:

the window includes a flap configured to selectively cover the window.

27. (new) The tent of claim 15, wherein:

the window includes a flap configured to selectively cover the window.

28. (new) The tent of claim 16, wherein:

the window includes a flap configured to selectively cover the window.

29. (new) A tent with extendable windows designed to increase usable space in the tent comprising:

a main structure including a plurality of walls oriented at a first angle with respect to a vertical reference; and

a plurality of windows each including an awning, frame and single screen extendable to a substantially vertical orientation;

whereby the tent has increased usable space when the windows are extended.

30. (new) The tent of claim 29, wherein:

the frame includes a flexible pole; and

the frame includes a sleeve into which the pole is positioned.
